Corporate Responsibility Summit "Building Blocks of Sustainability"

Progressive companies are challenged to stay informed on corporate responsibility issues confronting them in today's marketplace; the issues range from human rights to environmental to sustainable viability. These issues are compounded by the need to concurrently manage risk and transparency for the corporation and its global supply chain.

What do leading companies do in the response to these pressures?

Forward-thinking leaders in the field of CR find value in the insight gained from other leading companies on how they are addressing similar issues. Showcasing successful strategies and the lessons learned along the way can offer practical solutions to the emerging challenges we face. Network with industry leaders as we share insights and discuss global approaches for the building blocks of sustainability.

This popular annual event is tailored to those working on all aspects of corporate responsibility and sustainability management at companies in the automotive and heavy equipment industry and technology sectors, including environmental, compliance, operations, sales/finance, investor relations, procurement, and supply chain professionals.

Session Highlights

- Conflict Minerals – CM-3 V4.2 Overview
